Bali

PERSONAL SUMMARY

Detail-oriented Computer Engineering graduate with over 2 years of hands-on experience designing and deploying end-to-end IoT solutions and embedded systems. Proficient in programming microcontrollers (ESP32, Arduino), optimizing firmware in C++, and implementing real-time communication protocols like MQTT. Proven track record of bridging the gap between physical hardware and software systems to build automated, secure, and data-driven infrastructure.

EDUCATION

Universitas Indonesia

August 2020- September 2023

Teknik Komputer

S1

3.95

SKILLS

Laravel, React, Figma, C++, Embedded C, MQTT (Real-time data transmission), Control System, Firmware Optimization, ESP32, Arduino Mega, RFID Modules, Biometric Sensors (Fingerprint), Sensor Integration (pH, Temperature, Humidity, Color Sensors).

CERTIFICATIONS & LICENSES

Cloud Computing – AWS Academy

December 2023 – January 2028

<https://AWS.Academy-CloudComputing>

PROJECTS

Smart Agriculture Monitoring System

October 2023 - Mei 2024

Developed an IoT-based soil and weather monitoring system using ESP32 microcontrollers and various environmental sensors (humidity, temperature, pH). Built a robust data communication architecture utilizing the MQTT protocol for real-time data transmission to a local server. Designed an interactive monitoring dashboard to visualize field conditions, improving automated irrigation efficiency.

Automated Warehouse Sorting Robot

March 2024 - June 2024

Engineered a control system for an automated sorting robot using Arduino Mega and basic computer vision for object detection.

Integrated color sensors and servo motors to precisely classify and sort inventory packages based on predefined criteria.

Optimized C++ firmware on the microcontroller, reducing mechanical execution response time by 20%.

Smart Room Access Control with Biometric Authentication

August 2024 - February 2025

Built a secure room access system featuring fingerprint scanning and RFID modules integrated with a centralized database. Developed a backend API to log user access history, timestamps, and entry/exit security data automatically. Created a web-based interface for administrators to manage user access privileges and monitor door status remotely.

EXPERIENCES

IoT Systems Engineer

October 2024 - February 2025

Global Telecom Solutionsn

full time

Hybrid

Bali

Configured and maintained enterprise-level network routers, switches, and firewalls for client projects. Monitored network traffic and resolved connectivity bottlenecks using Wireshark and solarWinds tools. Drafted technical documentation for network topology upgrades, ensuring clear handovers for the support team.
